FACT miscellaneous

The summer solstice, also called the estival solstice or midsummer, occurs when one of Earth's poles has its maximum tilt toward the Sun. In 2023, in the Northern Hemisphere, this will take place on Wednesday, 21 June at precisely 10:58 a.m. EST. The solstice is actually an exact moment and not the entire day, but does mark the official start of summer and on this day, you should expect to see about 16 hours of daylight. Enjoy!

thermo scientific SureSTART™

The SureSTART collection is a comprehensive range of vials, caps, and inserts that provide you with performance, instrument compatibility, affordability, and delivery that you need. **One Collection. Three Performance Levels*.**
